

## PARENTAL CONTROL™

The complete parental control package for home PC users

### Features

**Intelligent Image Filtering** – Using F4i's ICA image recognition technology, web content is vetted in real-time, allowing harmless pictures to be displayed whilst restricting access to those that may cause offence.

**Context Sensitivity** – Few content filtering technologies are able to perform as effectively as that offered by Preventon: It not only restricts the display of swear words and other offensive terms, but it also takes the context in which they appear into account before doing so. This helps prevent incorrect filtering of results and a higher degree of accuracy. This is possible in multiple languages including English, Dutch, French, German, Turkish and Spanish.

**Full Computer Lockdown** - Through its intuitive interface Preventon Parental Control enables you to specify the programs that you do and do not wish to be run on your PC - even applications that have not yet been installed can be prevented from being executed!

**Are you concerned that your children may be exposed to inappropriate material on the Internet when you are unable to supervise them?**

**Is their schoolwork suffering through constant use of addictive video games?**

**Do many people have access to your PC and you'd simply like to restrict what they can run, view and change on it?**

**100%**  
Subscription Deployment  
Compatible

### Description

Preventon Parental Control allows you to take full control over the web pages and images your PC can display, the applications that can be run upon it and even the times at which it may be used.

Through a simple password-protected user interface, Preventon's Parental Control software provides parents and educators with complete peace-of-mind that children are protected from inappropriate and harmful Internet content such as pornography, hate & racist websites and other unsavory online material.

The intuitive interface enables the authorised 'administrator' to set the level of Internet content filtering and protection that is to be enforced by the system; which software programs can be run, and at what times of day.

Users of the protected system are presented with a message from the Preventon solution whenever an attempt is made to view unsavory Internet material. Indecent images and words are automatically censored by the system. Attempts to run disallowed programs are simply ignored, as are attempts to install new programs or shutdown protective desktop security and content filtering.

#### Requirements

**Operating Systems supported:** Windows 98®, Windows ME®, Windows 2000®, Windows XP®

**System Requirements:** Pentium® processor (or compatible) 64Mb RAM, CD-ROM drive, 20Mb free Hard Disk space

**Network Protocol:** TCP/IP.

**Network Connections:** DSL, ADSL, ISDN, Modem, Cable Modem, LAN (or other Internet/IP connections).
